# PTB SAFETY

Qingdao Pit Bull Safety Technology Co., Ltd.(PTB SAFETY) is a professional manufacturer of work gloves with over 15 years of experience in the industry. We produce a wide range of dipped work gloves, including cut resistant gloves, latex coated work gloves, nitrile coated gloves, and PU coated gloves. Our factory covers an area of 100,000 square meters and has 1,000 sets of various glove knitting machines and 17 dipping lines.

Our products are ISO9001, CE, ANSI, REACH and CAE certified.

You can be sure that our cut resistant gloves are manufactured to the highest quality standards and will protect your customers hands from harm while working.

Leave your customized information with us and let us help you customize your brand work gloves! We provide customized cut resistant gloves production service, so you can be sure that you're getting the best possible product for your needs.

Leave your contact information in the form below and let us help you customize your brand work gloves today!

### Hand and Arm Protection

#### Features

#### Application

QINGDAO PIT BULL SAFETY TECHNOLOGY CO.,LTD.

# CE EN388:2016 Standard

## Hand and Arm Protection

This is the most common European Standard for testing gloves in general industrial applications. It is also referred to in many of the specialist glove standards, for activities such as welding and handling of chemicals. EN 388 was first published in 1994 and subsequently revised in 2003 and 2016. It includes four main physical tests to assess the resistance of the gloves palm area to mild abrasion, cutting, tearing, and puncture. The glove's performance is graded according to four or five performance levels. The end user can select a glove with a performance level profile that suits a particular work activity. So for example, a glove could be performance level 4 for abrasion but level 1 for tearing (in European standards the higher the number, the greater the protection).

### Abrasion

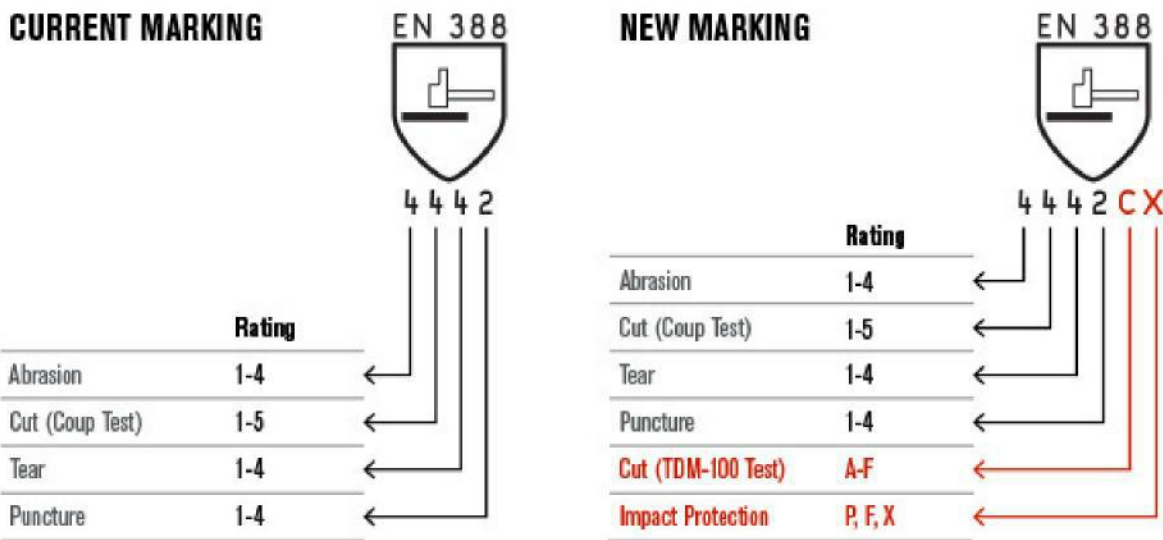

Samples are cut from the palm of a glove and rubbed against a 180 grit abrasive paper using a "Martindale" type abrasion machine. The number of cycles for the samples to the hole is measured. Four performance levels are defined in EN 388 ranging from level 1 = holing > 100 cycles to Level 4= holing > 8000 cycles.

### Blade Cut

Samples are taken from the palm of a glove and the number of cycles to cut through the full thickness of the test sample by a circular rotating blade is recorded. Blade sharpness will vary and is assessed by using the cut test machine to cut through a standard reference fabric. The cut resistance of the glove is based on a relative index that compares the number of cycles to cut through the glove when compared with the standard fabric. Five performance levels are defined in EN 388 ranging from level 1 = Cut index > 1.2 to Level 5 = Cut index > 20.

### Tear

"Trouser leg" type samples are taken from the palm of a glove and are torn apart using a standard tensile test machine. Four performance levels are defined in EN 388 ranging from level 1 = tear strength > 10N to Level 4 = tear strength > 75N.

# ANSI Cut Resistance Standards Comparisionard

## Hand and Arm Protection ANSI/ISEA 105

In 2016, the American National Standards Institute (ANSI) announced an update to the ANSI/ISEA 105 standard for cut resistant gloves and sleeves. The 2016 edition introduced new classification levels that include a new scale to determine cut scores and a revised method for testing gloves to the standard. The new ANSI standard now features nine cut levels instead of the traditional five cut level classifications. By doing this, gaps between each cut level have been significantly reduced which helps define protection levels with the highest gram scores. To differentiate from the old score level, the new ANSI cut levels now feature an "A" in front of the score. See the chart below that highlights the difference between the old and new scale levels.

OLD: ISEA 105-2011		NEW: ANSI/ISEA 2016		
ASTM F1790-05 (CPPT)		ASTM F2992-15 (TDM)		
LEVEL	GRAMS	LEVEL	GRAMS	GRAMS
1	≥ 200	A1	≥ 200	200-400
2	≥ 500	A2	≥ 500	500-599
3	≥ 1000	A3	≥ 1000	1000-1499
4	≥ 1500	A4	≥ 1500	1500-2199
		A5	≥ 2200	2200-2999
		A6	≥ 3000	3000-3999
5	≥ 3500	A7	≥ 4000	4000-4999
		A8	≥ 5000	5000-5999
		A9	≥ 6000	6000+

NEW ANSI STANDARD NOW FEATURES 9 CUT LEVELS

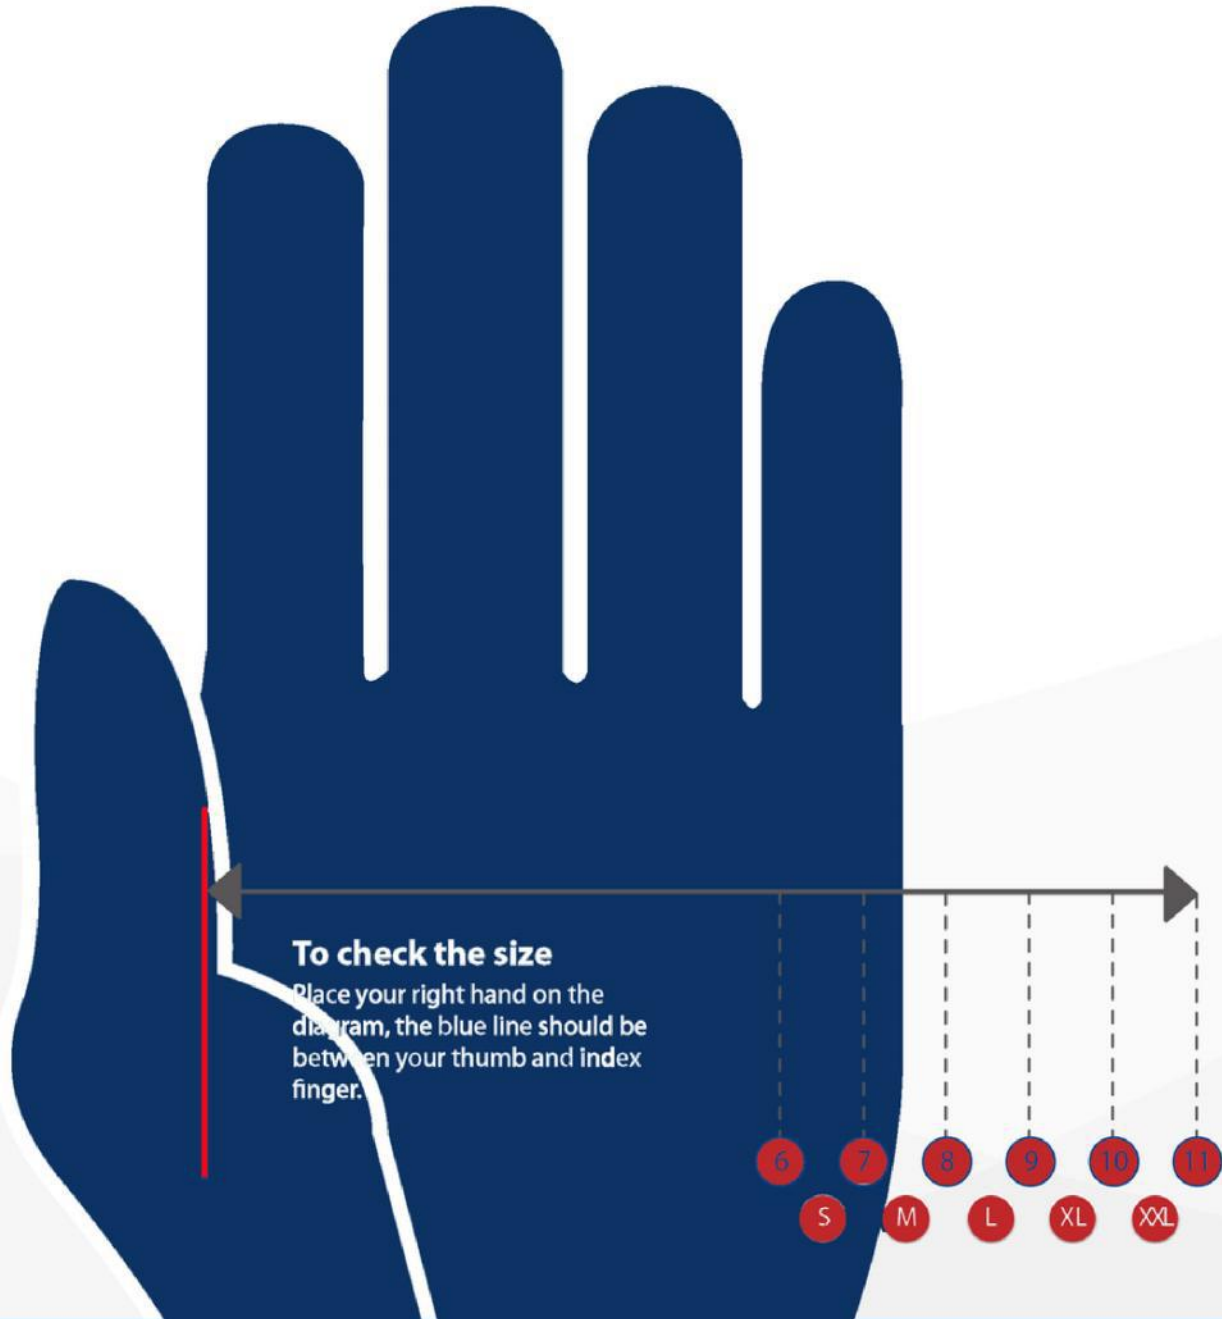

# Hand Size Chart

The way a glove fits is a crucial factor in the dexterity of the working hand. Please use the diagram below to identify your glove size.

If the glove is too small, it cuts off the blood circulation and restricts the movement of the hand.

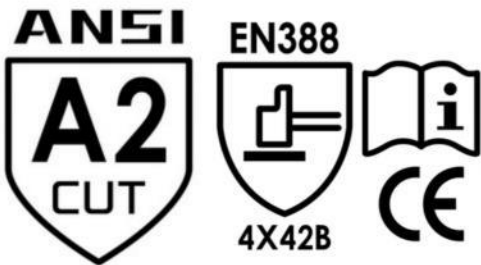

On the contrary, too big gloves slip off at the slightest movement and make your handling very imprecise.

Glove size further to EN420	Hand (mm)		Glove
	Palm circumference	Length	Minimum Length
6	152	160	220
7	178	170	230
8	203	182	240
9	229	192	250
10	254	204	260
11	279	215	270

SANDY NITRILE GLOVES

Your Hand Protection Guardian

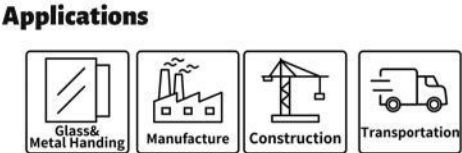

# Sandy Nitrile series

NBR GLOVES

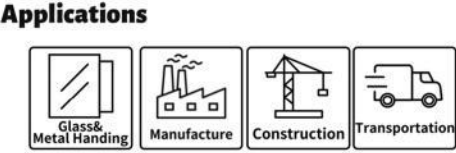

**S3101**  
**18 gauge sandy nitrile palm coated cut resistant gloves**

- Ultra lightweight 18 gauge seamless liner provide super comfortable,dexterity and breathability.
- Sandy nitrile palm coating offers great grip at dry,wet and oil conditions.
- A6 cut resistant hand protection
- Best abrasion resistant protect

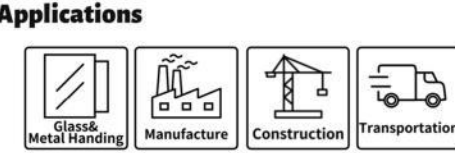

**S2801**  
**18 gauge sandy nitrile palm coated cut resistant gloves**

- Seamless 18 gauge knitted SteelMix gloves liner provide super comfortable & flexible touchatg
- Touchscreen funtion can be added
- Best grip sandy nitrile palm coating
- Best abrasion resistant protect

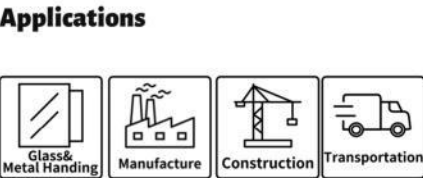

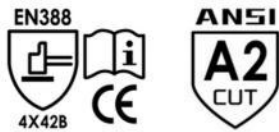

**GD520**  
**18 gauge double sandy nitrile palm coated cut resistant gloves**

- 18 Gauge seamless knitted cut resistant gloves liner
- Super soft & flexible handfit
- 3/4 Gray smooth nitrile coating is waterproof & oilproof
- Sandy nitrile surface provides firm grip
- Best abrasion resistant protect
- Thumb reinforcement protection

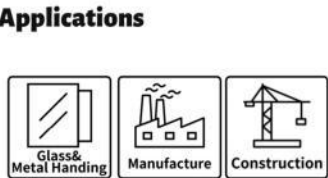

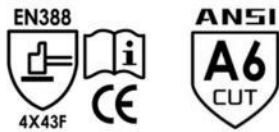

**S2602**  
**18 gauge sandy nitrile palm coated cut resistant gloves**

- Ultra lightweight 18 gauge seamless liner provide super comfortable and breathability.
- Supersoft foam nitrile grip provide very good grip at dry, wet & oily conditions.
- Best abrasion resistant protect
- Thumb reinforcement protection

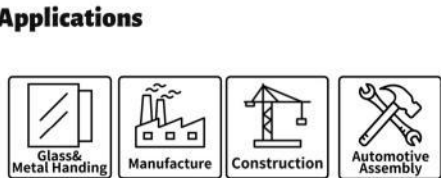

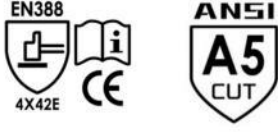

**S2901**  
**15 gauge sandy nitrile palm coated cut resistant gloves**

- Seamless knitted SteelMix gloves liner with spandex & steelfiber,which provide very soft & breathable
- Additional touchscreen function
- Best grip sandy nitrile firmgrip can make you pickup tiny parts at wet &oil conditions
- Best abrasion resistant protect
- A6 cut resistant protection
- Thumb reinforcement protection

**S2501**  
**15 gauge sandy nitrile palm coated cut resistant gloves**

- PTB Safety SteelMix super comfortable gloves liner.
- Steel fiber & spandex blended gloves liner provide soft and flexible grip.
- Foam sandy nitrile can help to pickup tiny parts at wet & oily conditions
- Best abrasion resistant protect

## Introduction

PTB SAFETY's welding gloves factory specializes in producing high-quality welding protective gloves designed to offer superior protection and comfort for workers worldwide. Our factory is equipped with advanced production equipment and employs top-tier manufacturing processes to ensure that every pair of gloves meets strict safety standards. We use premium materials that are heat-resistant, puncture-resistant, and durable, combined with expert craftsmanship, to provide the most reliable protection for welders. Our products are certified with CE, ANSI, and other international certifications, ensuring consistent quality and compliance with global safety requirements. Our welding gloves are perfect for various industrial environments, particularly in the welding and metalworking industries, offering excellent functionality and comfort.

With more than 40 sewing workers, 15 leather cutting machines, and 4 glove ironing machines, we can produce more than 15,000 pairs of welding gloves monthly.
